

ClaimVector™ Workers' Compensation Claims Benchmarking Solution

AI-powered claims performance assessment for carriers

ClaimVector uses real claims data – not generic market averages – to help carriers evaluate portfolio performance, identify emerging risks, and support repeatable decision-making.

Transforms complex claims information into actionable insights

- Benchmark portfolio performance against relevant peer cohorts
- Surface key drivers of claim cost, duration, and adverse development
- Apply consistent year-over-year evaluation logic for more defensible comparisons

Are you ready to move beyond static reporting?

ClaimVector is designed to support superior, data-backed insights for carriers to deliver enhanced portfolio guidance and direction. Your claims are aligned by factors like industry, geography, size and claim maturity.

What sets ClaimVector apart from the competition:

- Applies deep Workers' Comp expertise to carriers' existing workflows, turning experience into practical decision support.
- Connects retrospective analysis with forward-looking intelligence to guide smarter decisions
- Delivers transparent, explainable benchmarks carriers can confidently stand behind.
- Built into repeatable workflows, with value compounding as data history and adoption grow.
- Supports strong financial stewardship while enabling responsible decisions that improve outcomes for injured workers.
